Week 3 pro no :1

Bank Management System

```
from abc import ABC, abstractmethod

# Abstract Class
class BankAccount(ABC):

    def __init__(self, name, balance):
        self.name = name
        self.__balance = balance   # Encapsulation

    def get_balance(self):
        return self.__balance

    @abstractmethod
    def calculate_interest(self):
        pass

# Child Class
class SavingsAccount(BankAccount):

    def calculate_interest(self):   # Polymorphism
        return self.get_balance() * 0.04
```
