Week 3: pro 4:

Vehicle Rental System

```
from abc import ABC, abstractmethod

# Abstract class
class Vehicle(ABC):

    @abstractmethod
    def calculate_rent(self, days):
        pass

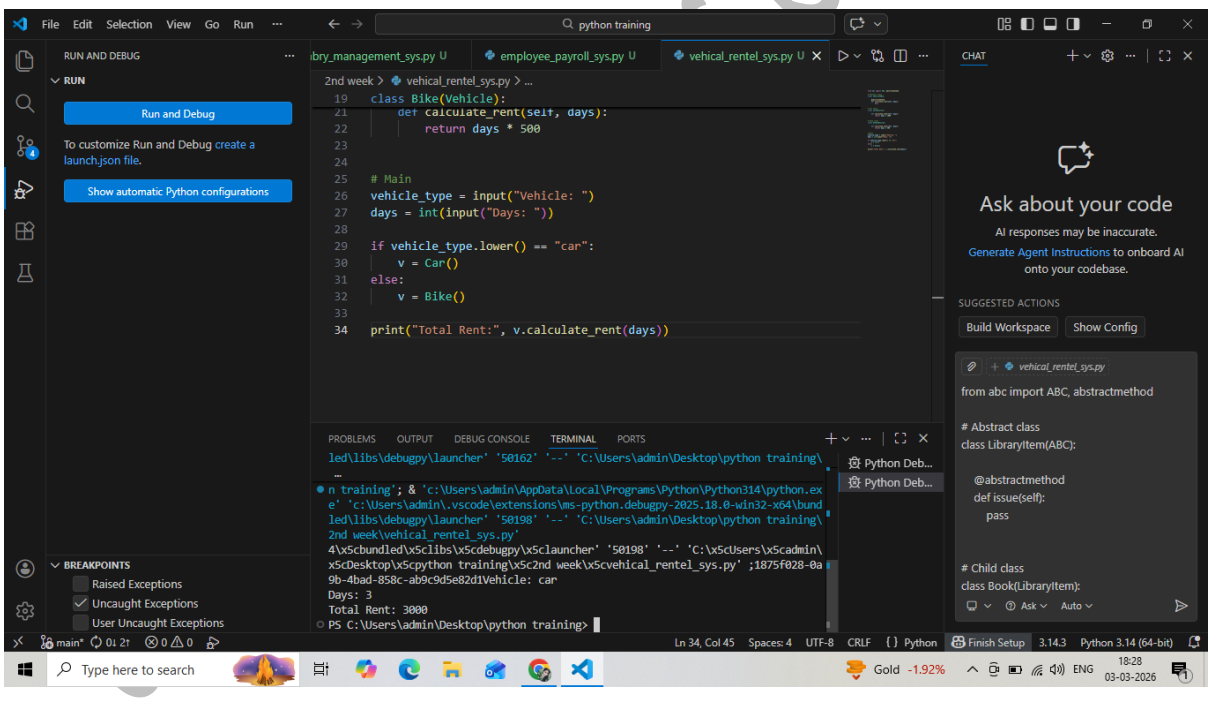
# Car class
class Car(Vehicle):

    def calculate_rent(self, days):
        return days * 1000

# Bike class
class Bike(Vehicle):

    def calculate_rent(self, days):
        return days * 500

# Main
```

aswini.s 3rd yr btech IT


```
vehicle_type = input("Vehicle: ")

days = int(input("Days: "))

if vehicle_type.lower() == "car":

    v = Car()

else:

    v = Bike()

print("Total Rent:", v.calculate_rent(days))
```
